A unique system to remove toxins naturally, leaving air free of chemicals, dust, dander and allergens

Plants are a natural solution for repairing the air by removing harmful airborne pollutants, including toxins, chemicals, dust, allergens and pet dander. Until now, nothing has compared to nature’s ability to heal itself.

Introducing the Plant Air Purifier®!
The Plant Air Purifier® has a unique green technology to purify the air. It uses a ventilating system and hydroculture that purifies 100 times more efficiently than a common houseplant.

Benefits of the Plant Air Purifier

- Cleans up to 1,500 cubic feet per hour
- Removes harmful toxins, including chemicals*
- Filters dust, mold, allergens, and dander
- Cleans 100 times faster than average houseplant
- Removes odors
- Humidifies as it filters
- No expensive filters to replace
- No soil means less mess and maintenance
- Less than $20 a year in electricity to operate

*Research by NASA and Wolverton Environmental Services Inc. shows that The Plant Air Purifier® removes airborne toxins commonly found in new homes, offices, and/or sick-buildings. Toxins may include formaldehyde, benzene, trichloroethylene, even radon.

A Greener Solution

The Plant Air Purifier® is an ecologically smart choice for clean air. Unlike most other air purifiers, the Plant Air Purifier® doesn’t require wasteful filters that become toxic, or produce ozone as a by-product. It uses only minimal electricity, water, periodic liquid plant nutrient and light.

It’s the cleanest, greenest solution to fresh indoor air.
What Is The Plant Air Purifier®

The Plant Air Purifier® is a system that includes a planter, ceramic growing media and a plant of your choosing (not included).

**Planter** - The planter includes an electric fan, ventilation system and water reservoir.

**Ceramic Growing Media** - Specially developed ceramic media is placed inside the planter to anchor the roots - no soil required.

**A Plant** - Accommodates many different types of plants (not included).

How It Works - It’s In The Roots

The naturally occurring microbes on the plant’s roots are the most important air-care component. They absorb airborne contaminants and break down toxins into new plant growth and oxygen.

The Plant Air Purifier® uses specially developed ceramic media instead of soil, allowing more air to reach the roots.

The fan and ventilation system increase the volume of purified air.

Healthy Addition For Any Room

The Plant Air Purifier® provides healthy indoor air for your home or office.

Perfect for:
- Bedroom
- Kitchen
- Living Room
- Study
- Bathroom
- Office
- Reception Area
- Work Station
- Lobby
- School
- Hospital
- Retail Store
- Factories
- Municipal Building
